#### Quarter 4 Comment

The FMSIB output measure "Number of barriers mitigated" is an annual measure that is measured at the end of each fiscal year. At the time that two barriers were reported mitigated, it was assumed that if a project was underway then it should be counted. Upon further consideration, FMSIB decided that barriers would be counted consistently at the time the projects were completed. The two barriers identified at the Allan Street Bridge were mitigated when the bridge was dedicated December 2, 2000.

#### Quarter 8 Comment

"Number of barriers mitigated" is an annual measure that is measured at the end of each fiscal year. FMSIB decided that they would count barriers consistently at the time the projects were completed. The two barriers mitigated had been previously counted at the end of the first fiscal year because the project was underway. The two mitigated barriers are from the Allan Street Bridge project. Allen Street bridge was dedicated December 2, 2000.
